

**PROJECT SHEET**

# Masonry Restoration Underwater

VENICE, ITALY

## THE PROJECT

Following exceptional weather events in November 2019, when floodwaters in Venice rose to

1.87 m, urgent restoration of roads, sewers, and canal banks in the historic center was required.

**Owner** \_\_\_\_\_

INSULA SpA - Comune di Venezia

**Architect** \_\_\_\_\_

ing. Dino Cimoli - Insula SpA

**Contractor** \_\_\_\_\_

Lavori Terrestri e Marittimi srl -  
Costruzioni Manutenzioni e Servizi  
srl - IDRA srl Lavori Subaquei

**Duration** \_\_\_\_\_

2 months

**Delivery date** \_\_\_\_\_

December 2020

## TECHNICAL APPROACH

Natural PROMPT cement was used to reinforce foundation walls made of stone and brick.

It enabled the complete restoration of the banks and was applied to both above-water and submerged sections.

Underwater applications were carried out using pure paste.

+

### VICAT ADVANTAGES

- Technical support
- On-site assistance

### PERFORMANCE REQUIREMENTS

Marine resistance

Easy preparation and application

Rapid hardening

No efflorescence

Respect for aquatic fauna and flora
